

Push-To-Set™ Pediatric Intermittent Suction Unit Analog (ISO/CE)

DESCRIPTION AND APPLICATION

The Ohio Medical® Pediatric Push-To-Set™ Intermittent Suction Unit (PED-ISU) is a medical suction device designed to deliver continuous or intermittent controlled vacuum from a hospital pipeline vacuum system. It provides the versatility of an intermittent mode for nasogastric drainage and a continuous mode for tracheal, pharyngeal, or surgical suctioning. The Pediatric model is designed to prevent vacuum adjustment above a preset vacuum limit level. This device is ideal for neonatal and pediatric patients or sensitive applications where limiting the peak vacuum level is important. The intermittent mode uses a pneumatic logic device to turn the suction “ON” and “OFF” automatically (intermittent starts in the “ON” cycle). This unique Unilogic timing module sets the industry standard for quiet, reliable, controlled intermittent suction. The Pediatric model is adjustable from 0-18.0 kPa (0-135 mmHg), to meet most low clinical suction requirements. It also contains a positive pressure relief to reduce potential injury to the patient and equipment if momentarily attached to a positive pressure gas source.

The Pediatric Push-To-Set™ Intermittent Suction Unit is a low vacuum/high flow regulator.
