DESCRIPTION AND APPLICATION

Ohio Medical® Continuous Vacuum Regulators provide regulated, continuous suction for tracheal and pharyngeal airway management, surgical procedures and continuous nasogastric drainage. The Continuous Vacuum Regulator is compact, lightweight and specially designed to be both durable and serviceable. An industry standard, it includes several models and convenient features designed to improve suctioning procedures and enhance clinical practice throughout the hospital. Modular design makes maintenance and repairs both quick and easy.

The Three Mode and Two Mode High Continuous models provide adjustable vacuum from zero to full-line vacuum. Both are classified as high vacuum/high flow.

The three mode model offers a MAX mode which provides unrestricted full-line vacuum for emergencies. The low model includes a negative pressure limiting valve to limit maximum negative pressure to 18.0 kPa (135 mm Hg). The low model is classified as low vacuum, high flow.

For patient safety in case of accidental connection to a positive pressure gas, these regulators are equipped with a positive pressure relief valve.
