Medical Gas Design Guide

OHIO MEDICAL LLC

Ohio Medical is a global leader of medical air and vacuum pumping systems and medical suction and oxygen therapy devices. Our trusted brands include Ohio Medical and Amvex medical suction regulators, Ohio Medical and Amvex air and oxygen flow meters, medical air and vacuum pumping systems, and portable suction equipment.

Ohio Medical meets applicable regulatory requirements in the countries where we make and sell our products. Ohio Medical operates in a registered FDA regulated medical device manufacturing facility and complies with ISO 13485 and ISO 9001 standards. All Ohio Medical medical gas products are produced to comply with NFPA® 99 standards.

With a dedicated team of industry experts, Ohio Medical takes great pride in providing our customers with high quality, innovative solutions to meet the challenges of today's marketplace.

The history of the "Ohio" name dates back more than 100 years ago to the Ohio Chemical and Manufacturing Company founded in Cleveland, Ohio. In 1910 the company began manufacturing one of the first anesthesia gas machines, The Ohio Monovalve, which was used extensively during World War I.

Squire-Cogswell, founded in Chicago, Illinois in 1916, was a vital contract manufacturer for Ohio Chemical. They developed and manufactured medical gas, suction and oxygen therapy equipment, including hospital vacuum regulators, custom vacuum pumping systems, and medical air compressor systems for healthcare applications. Squire-Cogswell achievements include inventing and patenting the "Diamond 1" (also known as the "Ohio Diamond") medical gas adapter in 1951, inventing the first wall mounted intermittent suction device used for patient drainage in 1964, and introducing the first portable suction pump in 1975.

In 2005, Ohio Medical LLC was formed. The foundation of the newly formed company included the acquisitions of the Ohmeda® suction and oxygen therapy business from GE Healthcare, and the Squire-Cogswell/Aeros company which manufactured portable suction equipment, medical and industrial pumping systems, and medical gas pipeline products.

In 2007, Ohio Medical LLC acquired Amvex. This greatly expanded the portfolio of suction and oxygen therapy products by including a global market leadership position for medical gas hoses, patented technologies for digital gauge suction regulators and dual port wall mounted integrated air and oxygen flow meters.

The next technological breakthrough came with the introduction of the Ohio Medical Push-To-Set™ (PTS) suction regulator. The PTS Regulator is the first suction regulator to address a potential national healthcare concern regarding inadvertent "over-suctioning" by incorporating the patented technology of an automated occlude-to-set feature, critical in setting appropriate vacuum pressure levels.

In 2010, Ohio Medical acquired MiniOX®, a long-standing leader of oxygen monitoring and analyzing products. MiniOX has a long history of serving the medical community and its rich history continues at Ohio Medical.

In 2016, Tenex Capital Management completed the acquisition of Ohio Medical. We are proud of the "Ohio" name and the significant impact our products have had on the medical industry and the patients we serve. Our brands stand proudly for patient safety, innovation, and quality products and have done so for more than 100 years!

OUTLETS

FEATURES:

- Accepts Chemetron®, Ohmeda/Diamond, Puritan Bennett® and DISS specific adapters
- Available for Wall/Ceiling, Console and Ceiling Column
- Pin indexed to prevent interchangeability of gas services
- NFPA® 99 Compliant
- Inlet pipe can be rotated 360 degrees for ease of installation
- Gas specific back bodies can accept either Quick Connect or DISS front latch valves
- Outlet can accommodate various finished wall thicknesses from 3/8" (10 mm) to 1-1/4" (32 mm)
- Chrome trim plates available

DISS

Ohio Medical manufactures a wide variety of quick connect medical gas adapters, including Diamond/Ohmeda, Chemetron, Puritan Bennett, MedStar, Oxequip and Schrader styles to suit your needs. Available options include 1/8" & 1/4" MNPT and FNPT, 1/4" & 5/16" Hose Barb and much more.

INTEGRATED FLOWMETER

PIPELINE

The **Integrated Flowmeter Outlet** combines a **Flowmeter** and a **Medical Gas Outlet** into a **single compact design**. The Integrated Flowmeter saves space, reduces construction costs and ensures that health care providers will always have a Flowmeter when they need one. The right side port connection has a traditional tube style flowmeter which allows the user to adjust the flow setting. The left side port is a direct connection to the gas supply.

FEATURES:

- Compliant with the requirements of National Fire Protection Association® (NFPA) and Canadian Standards Association® (CSA)
- Indexed to eliminate interchangeability of gas services
- Easy to read flow indicator
- Five year warranty
- A large color coded front plate is used for ease of gas identification and aesthetic appeal
- Available for Oxygen or Air service
- Available configurations to fit various rough-in suppliers

ALARMS

Digital Area Alarm

FEATURES:

- Pressure Sensitive LCD Touch Screen
- Fully complies with NFPA® 99
- UL/CSA Certifications Standard
- Adjustable Gas to Zone Locations
- Auto Detection of Gas to Zone Locations
- Communicates to BMS
- NFPA or ISO colors - Adjustable
- psi/KpA; inHg/mmHg - Adjustable
- English/Spanish Adjustable
- Assembled in the USA in ISO 9001 & ISO 13485 Facility

ORDERING INFORMATION (PART NUMBERS)

To configure an area alarm, select the alarm type, then select gas type(s).

EXAMPLE:

263853, O, A, V

263853,O, A, V =

Remote Area Alarm
with 3 gases:
Oxygen, Air, Vacuum

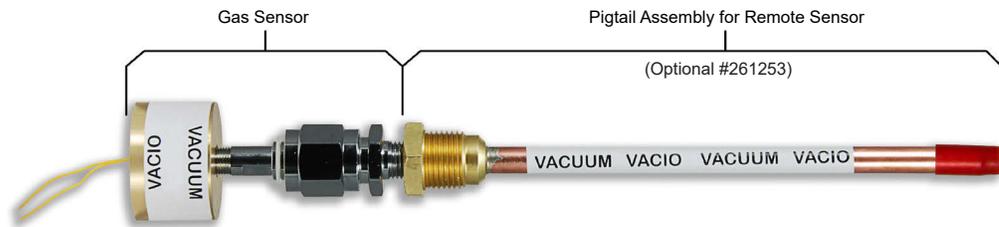

Example:

263868,O, A, V, N2, N, C,
IA, W = Local Area Alarm
using all 8 gases

Local Area Alarm		Remote Area Alarm		Gas Type (enter Gas Type after part number)	
1 Gas	263861	1 Gas	263851	O	Oxygen
2 Gases	263862	2 Gases	263852	N2	Nitrogen
3 Gases	263863	3 Gases	263853	IA	Instrument Air
4 Gases	263864	4 Gases	263854	A	Air
5 Gases	263865	5 Gases	263855	N	Nitrous Oxide
6 Gases	263866	6 Gases	263856	W	WAGD
7 Gases	263867	7 Gases	263857	V	Vacuum
8 Gases	263868	8 Gases	263858	C	Carbon Dioxide

NOTE: Sensors shipped separately for connection at site. Order of sensor/gas types in part number not required. For retrofit, please contact your sales representative.

AREA ALARM CONFIGURATION

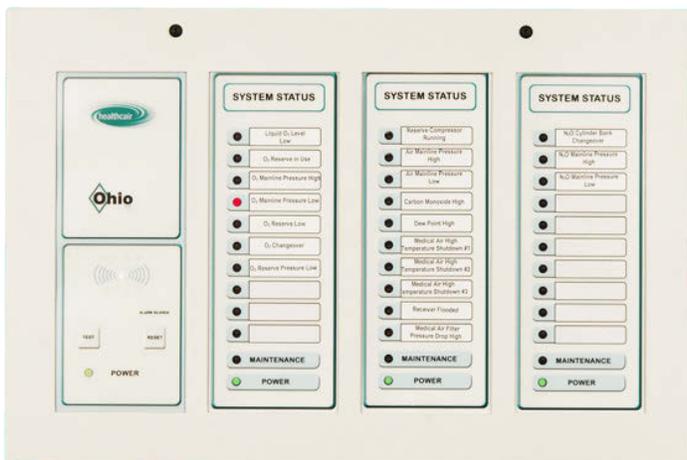

Remote Sensors are mounted outside the alarm enclosure and wiring is run from a specific sensor to the alarm. As with the local set-up, remote sensors are wired directly into the terminal strips. For remote installations where codes require electrical conduit, a sensor may be outfitted with a sensor enclosure having standard 7/8" knockouts. Remote sensor enclosures are available for purchase from Ohio Medical or an Ohio Medical Representative.

FEATURES:

- Adjustable audible alarm repeat
- Field adjustable pressure settings
- High visibility LED readouts
- Dry Contacts available for connection to BMS or other.
- Underwriters Laboratories Inc® (UL) listed
- Normally open or closed contacts (Master/Combo)

*30 and 40 points may only be ordered with 6 bay

*choose all that are required

Note: The combination alarm is available in two sizes; 4 and 6 bay. The 4 bay box can accommodate up to a combination of 4 gasses and 10 master alarm points or 1 gas and 20 master alarm points with an overall frame size of 19" L x 11.5" H. The 6 bay can accommodate up to 8 gasses with 10 master alarm points or 1 gas and 40 master alarm points with an overall frame size of 26" L x 11.5" H.

ZONE VALVE BOXES

FEATURES:

- Full port design
- Blow-out proof stem
- Cleaned for medical gas service
- Teflon seats
- Dual gauge port on pipe extension

Single Zone Valve Box For 1/2", 2", 2-1/2" and 3" Valves

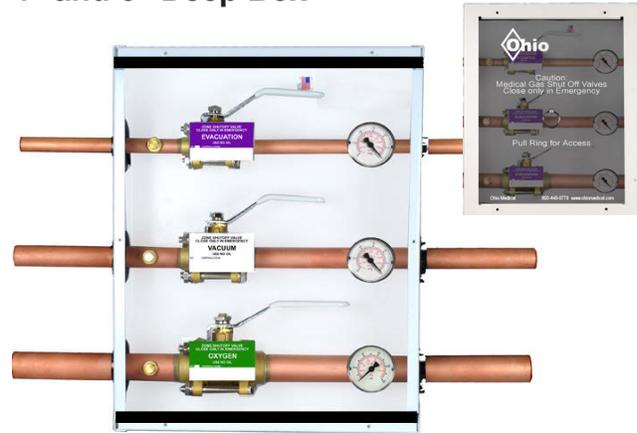

Part Numbers:

261901-05	1/2"	Single Zone Valve Box
261901-07	3/4"	Single Zone Valve Box
261901-10	1"	Single Zone Valve Box
261901-12	1-1/4"	Single Zone Valve Box
261901-15	1-1/2"	Single Zone Valve Box

The following require a 6-1/2" deep box

261901-20	2"	Single Zone Valve Box
261901-25	2-1/2"	Single Zone Valve Box
261901-30	3"	Single Zone Valve Box

Multiple Zone Valve Box 4" and 6" Deep Box

Part Numbers:

261902-XXXX	Double Zone Valve Box
261903-XXXXXX	Triplex Zone Valve Box
261904-XXXXXXXXXX	Quadruplex Zone Valve Box
261905-XXXXXXXXXXXX	Quintuplex Zone Valve Box

Replace XX with:

05 = 1/2"
07 = 3/4"
10 = 1"
12 = 1-1/4"
15 = 1-1/2"
20 = 2" (Requires a 6-1/2" deep box)

VALVES WITH EXTENSIONS

FEATURES:

- Full port design
- Blow-out proof stem
- Sizes range from 1/2" (13mm) to 4" (76.2mm)
- Cleaned for medical gas service
- Teflon seats

Valve with Extensions

VACUUM REGULATORS

Digital:

- Easy to read display
- No moving parts means no calibration required
- Accuracy is +/- 1% of full scale

Analog:

- Analog gauge designed for clarity
- Accuracy of +/- 3% of full scale

Features:

- Available in Continuous and Cont/Intermittent
- Available in Adult, Pediatric, and Neonatal Models
- Color cases available for inventory management
- Various inlet and wall connection configurations
- Optional inlet filters and overflow safety traps available

FLOWMETERS

Pressure Compensated Flowmeters are designed to meet strict standards of durability and precision. The base is constructed of solid chromed brass. Flowmeters are available with a wide variety of options including DISS power outlets and twin flowmeter configurations. They are also available with an optional plastic DISS tubing nipple and a multitude of wall adapters.

PORTABLE SUCTION

Instavac® / is a multipurpose portable suction unit which produces both constant and intermittent suction with high vacuum and high flow levels to meet various clinical applications.

IDEAL FOR: Hospitals and extended care facilities requiring exceptional portable vacuum performance for Nasogastric, Thoracic, Oral, and Tracheal suctioning procedures.

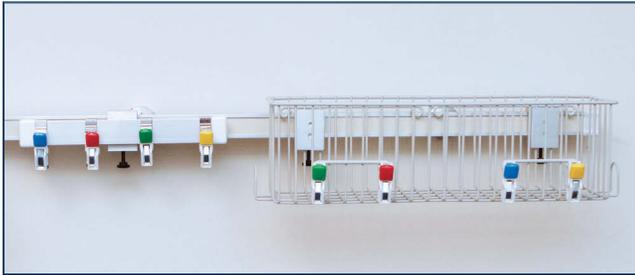

Care-e-vac®3 is a high vacuum and high flow AC/DC powered suction unit. It provides constant suction when wall outlets are unavailable. The unit is compact and very

lightweight. Optional floor stand and crash cart mount are available.

IDEAL FOR: Code carts, patient transportation or wherever a powerful suction unit with battery power is required.

EQUIPMENT RAIL SYSTEMS

Equipment Rail Systems offer health care professionals many advantages in the use of critical care equipment.

Work Flow Optimization

- Improve clinical proficiency and productivity
- Mount regularly used equipment where it is needed so it is easily accessible

Cost Savings

- Reduces construction and installation costs
- Helps eliminate damage to the wall and outlets, reducing the cost of maintenance and repairs

Flexibility

- Change out equipment and devices quickly, with minimal disruption
- Provides proper workflow for staff in order to adapt to changing needs

Space Saving

- Keep devices and equipment safely mounted to the wall and off the floor
- Manage supplies without the use of carts, cabinets or shelves

Medical Gas Expansion

- Easily add and/or relocate medical gas outlets in any hospital room.
- Effortlessly convert one patient room into a two patient occupancy room with the addition of moveable gas blocks

MINIOX

MiniOX oxygen monitors, analyzers and sensors quickly and accurately measure oxygen concentrations.

Health Care Applications:

- Neonatal care
- Respiratory therapy
- Home respiratory care
- Anesthesia

MiniOX 3000 Oxygen Monitor

This monitor is portable, easy to use, and is designed for in-line oxygen monitoring in a hospital, home ventilator, NICU and anesthesia delivery equipment applications. It is powered by one 9-volt battery and provides up to 1500 hours of use.

OHIO MEDICAL BLENDERS

Our blenders are suitable for respiratory applications including routine therapy, ventilator gas supply, sophisticated life support and critically-limited NICU procedures. Most models can be customized to include a flowmeter attachment with a variety of flow rates available. The blenders contain an audible alarm which warns the use if either of the gas sources changes by more than 20 psi from the other. Some models are equipped with a unique gas bleed ON/OFF switch to increase accuracy when needed, conserve gas and reduce worries.

COLOR LCD TOUCH SCREEN CONTROL PANEL

The Ohio Medical LCD Touch Screen Control Panel offers quick and easy set up as well as crystal clear monitoring of medical system conditions. A user defined password leads the system operator through all necessary set-up procedures.

This is the new standard for all Ohio Medical vacuum and air compressor systems.

Features and Benefits

Color LCD Touch Screen

- Crystal clear identification of gases and alarm conditions via a vivid 5.7" color LCD touch screen (10" LCD display optional)
- Screen brightness is field adjustable for enhanced visibility in all lighting conditions
- Highly reliable - pressure activated touch-screen
- Easy set-up - No push buttons or hidden toggle switches to mess with, allowing for quick and easy set-up via the front touch screen panel

UL 508A Certified

Meets NFPA® 99 Health Care Facilities Code

Connection to Building Management Systems (BMS) via Dry Contacts

- Dry contacts identify alarm conditions for high temperature, lag, high dew point and carbon monoxide (CO) gas status

Modbus Communications

- Modbus communications include alarm conditions for: system pressure, dew point, and CO gas status
- Optional communication protocols include Ethernet and BacNet

User Defined, Password Protected Options

- English or Spanish
- Security – individual set-up and maintenance screen passwords protect user/installer settings
- Date and time settings
- System pressure settings for Lead/Lag functions
- Pump alternation time

Maintenance Menu & Alerts

- Streamlined Maintenance Menu listing replacement items and maintenance durations
- Visual maintenance warnings (flashing red/white) when items are past due for service

System Status/Settings

System Status

- Alarm conditions clearly identified via audible and visual indicators
- Easy monitoring of system pressure (psiG, inHg), Dew Point (°F) and CO concentration (PPM)
- Battery life with indicator
- CO, Dew Point and pressure tracking over time (Trending Capabilities)
- System operational status and accumulated run-time monitoring

System Settings

- Adjustable start and stop pressure (lead and lag) minimum run time (MRT), and alternation time

Input / Output Status

- Monitoring of inputs/outputs for troubleshooting purposes

Alarm Status

- Advanced alarm condition monitoring
- Easy access to the reset function to deactivate an alarm and return to normal condition once the condition is corrected

Alarm History

- Alarm log with dates and times

Information

- Easy access to system information: Model Number, Sales Order Number, Program Name and Shipping Date.

OIL-SEALED ROTARY VANE VACUUM SYSTEM

- Continuous on demand
- Oil-sealed or Oil-Less running
- Available in Simplex, Duplex, Triplex or Quad
- Configurations:
 - Tank Mounted: Up to 10 hp
 - Stack Mounted: Up to 25 hp
 - Space Saver Vertical Tank Mount, Simplex or Duplex, up to 5 hp
- Warranty: 30/24 Months
- Vibration Free
- Quick Connect motor leads at the panel
- Modular frames
- Oil sealed systems feature synthetic oil, reducing maintenance and oil changes
- Oil-Less are suitable for dedicated WAGD
- NFPA® 99 compliant
- UL Listed Electrical Control Panel

LCD Color Touch Screen Available

OIL-SEALED ROTARY VANE MEDICAL VACUUM SYSTEM

The Ohio Medical Oil-Sealed Rotary Vane Medical Vacuum System is NFPA® 99 compliant for use in medical vacuum and dual Medical/Surgical applications. The unit consists of electric motor driven pumps, vacuum receiver, electrical control system, and interconnection piping and wiring. The components are modularly assembled to accommodate most existing doorways and designed for serviceability. The packaged unit is factory tested prior to shipment and warranted for a period of (30) months from date of shipment or (24) months from date of start-up.

VACUUM PUMP MODULE

The total recirculating oil sealed Rotary Vane Vacuum Pump is single stage air cooled, and capable of producing a maximum vacuum level of 29.1" Hg. The pump assembly includes an integral anti-suck back valve, exhaust oil separator delivering 99.9% oil-free air, oil level sight glass, and an exhaust pressure gauge. Each pump is protected by a temperature switch, check valve, and includes pump isolation valve, source isolation valve and flexible connector.

VACUUM RECEIVER

The Vacuum Receiver is constructed to ASME® (American Society of Mechanical Engineers) standards, rated for full vacuum, and include a valved by-pass, manual drain valve, vacuum gauge and the National Board label.

SYSTEM CONTROLS

The UL® listed electrical motor control system is of a fuseless design in a NEMA 12 enclosure. The "Continuous On Demand" feature stops the operation of the motor(s) during periods of low or no demand. The controls include individual self protected combination motor control(s) with short circuit, single phase and thermal overload protection, individual 120 volt control circuit transformers with fuseless primary and secondary protection, pressure sensors, and an electronic controller to automatically switch the operating sequence of the vacuum pumps, on multiplex systems only. The cabinet door has an HMI (Human Machine Interface) Color Touch Screen system status display to include system pressure, pump operation, accumulated time, maintenance interval, fault conditions and silence button; lighted Hand-Off-Automatic selector switches and safety disconnect operating handles.

All required local alarm functions are integrated into the packaged system. The circuitry is designed so the audible signal can be silenced and the visual indicator will remain until the fault has been cleared and the reset button actuated. Local alarm functions are provided for reserve pump in use (lag alarm). Dry contacts and/or remote communication protocols provided for remote alarm signals or BMS.

ACCESSORIES

Accessories included for job site installation are inlet and discharge flexible connectors, source isolation valve, vibration mounting pads and touch-up paint.

OIL-LESS ROTARY VANE VACUUM SYSTEM

Ohio Medical Oil-Less Rotary Vane, NFPA® 99 compliant vacuum system consists of electric motor driven pumps, vacuum receiver, and an electrical control system. The components are modularly assembled to accommodate most existing doorways. The system includes interconnecting piping and wiring to provide a functional operating package with applicable electrical and plumbing connections at the installation site. The packaged unit is factory tested prior to shipment and warranted for a period of 30 months from date of shipment or 24 months from date of start-up.

VACUUM PUMP MODULE

The Oil-Less Rotary Vane Vacuum pumps are single stage, air cooled, with self lubricating graphite vanes. The vacuum pump assembly includes an integral inlet filter, vacuum regulating valve, check valve, pump isolation valve, a source isolation valve and flexible connector.

VACUUM RECEIVER

The Vacuum Receiver is constructed to ASME standards, rated for full vacuum, and include a valved by-pass, manual drain valve, vacuum gauge and the National Board label.

SYSTEM CONTROLS

The UL listed electrical motor control system contains a fuseless design in a NEMA 12 enclosure. The “Continuous On Demand” feature stops the operation of the motors during periods of low or no demand. The controls include individual self protected combination motor controls with short circuit, single phase and thermal overload protection, Soft Start Technology, individual 120 volt control circuit transformers with fuseless primary and secondary protection, pressure sensors, and an electronic controller to automatically switch the operating sequence of the vacuum pumps. The cabinet door has an HMI (Human Machine Interface) Color Touch Screen system status display to include system pressure, pump operation, accumulated time, maintenance interval, fault conditions, and a silence button; lighted Hand-Off-Automatic selector switches and safety disconnect operating handles.

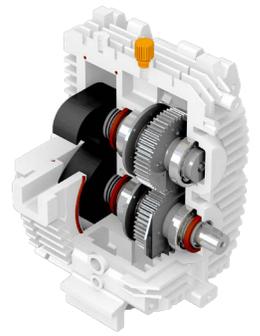

All required local alarm functions are integrated into the packaged system. The circuitry is designed so the audible signal can be silenced and the visual indicator will remain until the fault has been cleared and the reset button actuated. Local alarm functions are provided for reserve pump in use (lag alarm). Dry contacts are furnished for remote (master) alarm signals.

ACCESSORIES

Included for job site installation are inlet and discharge flexible connectors, source isolation valve, vibration mounting pads, and touch-up paint.

ROTARY CLAW VACUUM SYSTEMS

The Ohio Medical Oil-Less Rotary Claw Medical Vacuum System is fully NFPA® 99 compliant for use in medical vacuum and WAGD applications. The unit consists of electric motor driven pumps, vacuum receiver, electrical control system, and interconnection piping and wiring. The components are modularly assembled to accommodate most existing doorways and designed for serviceability. The packaged unit is factory tested prior to shipment and warranted for a period of 30 months from date of shipment or 24 months from date of start-up.

VACUUM PUMP MODULE

The Rotary Claw Vacuum Pumps are single stage, and air cooled. The pump design utilizes two ductile iron claw type rotors rotating in opposite direction inside a cast iron housing. The timing of the rotors are maintained by a precision gear set which is separated from the oil free pumping chamber by a combination of lip seals. The vacuum pump assembly also includes a 5 micron particulate inlet vacuum filter, vacuum regulator/relief valve, and exhaust silencer. The assembly also includes high temperature switch, check valves, pump isolation valves, a source isolation valve and flexible connectors.

VACUUM RECEIVER

The Vacuum Receiver is constructed to ASME standards, rated for full vacuum, and include a valved by-pass, manual drain valve, vacuum gauge and the National Board label.

SYSTEM CONTROLS

The UL listed electrical motor control system contains a fuseless design in a NEMA 12 enclosure. The “Continuous On Demand” feature stops the operation of the motors during periods of low or no demand. The controls include individual self protected combination motor controls with short circuit, single phase and thermal overload protection, Soft Start Technology, individual 120 volt control circuit transformers with fuseless primary and secondary protection, pressure sensors, and an electronic controller to automatically switch the operating sequence of the vacuum pumps.

The cabinet door has an HMI (Human Machine Interface) Color Touch Screen system status display to include system pressure, pump operation, accumulated time, maintenance interval, fault conditions, and silence button; lighted Hand-Off-Automatic selector switches and safety disconnect operating handles.

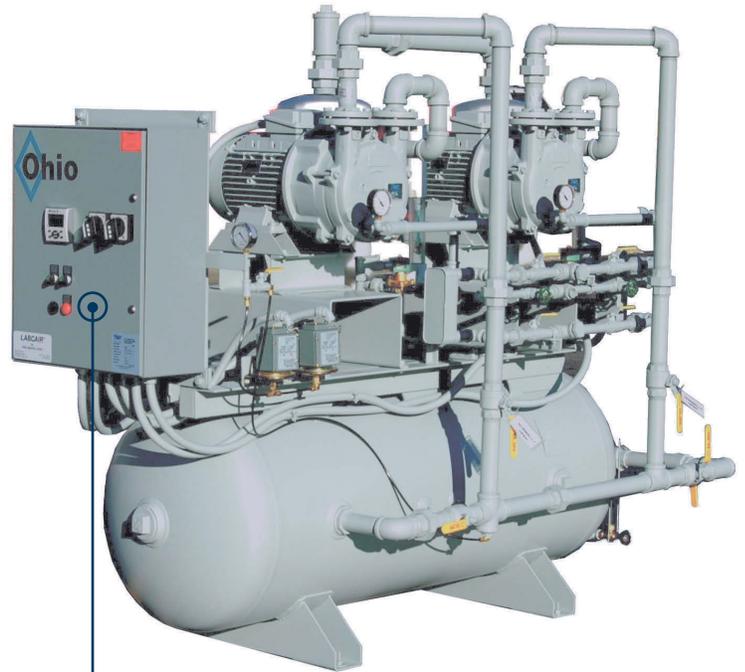

All required local alarm functions are integrated into the packaged system. The circuitry is designed so the audible signal can be silenced and the visual indicator will remain until the fault has been cleared and the reset button actuated. Local alarm functions are provided for reserve pump in use (lag alarm). Dry contacts are furnished for remote (master) alarm signals.

ACCESSORIES

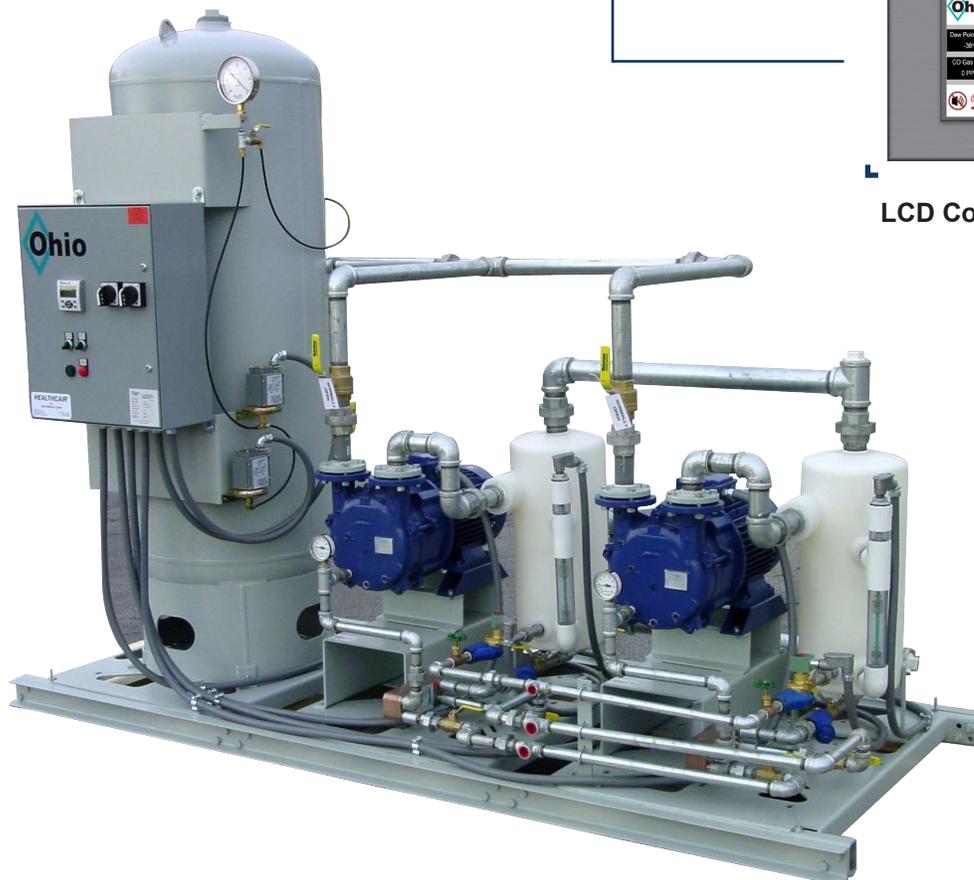

Included for job site installation are inlet and discharge flexible connectors, source isolation valve, vibration mounting pads, and touch-up paint.

LIQUID RING VACUUM SYSTEMS

- Water Sealed
- Available in Simplex, Duplex, Triplex or Quad
- Configurations: Tank, Base or Stack Mounted
- Medical or Laboratory Applications
- Minimal maintenance, Maximum Durability
- No contacting parts in pumping chamber
- Cool running and long wearing
- Optional Heat Exchanger shown below for optimal seal fluid conservation
- Total recirculation
- NFPA® 99 compliant
- UL Listed Electrical Control Panel
- Suitable for dedicated WAGD

LCD Color Touch Screen Available

LIQUID RING CONTINUOUS ON DEMAND VACUUM SYSTEM, PARTIAL RECIRCULATION

Ohio Medical partial recirculating, NFPA® 99 compliant vacuum system consists of electric motor driven positive displacement non-pulsating liquid ring vacuum pumps, ASME vacuum receiver, electrical control system, and interconnection piping and wiring. The components are modularly assembled to accommodate most existing doorways and designed for serviceability. The packaged unit is factory tested prior to shipment and warranted for a period of 30 months from date of shipment or 24 months from date of start-up.

VACUUM PUMP MODULE

Each Liquid Ring Vacuum Pump has a cast iron body, stainless steel impeller, and mechanical seals to be direct driven by a TEFC motor. Pump suction accessories include an inlet check valve, isolation valve and inlet flexible connector. Pump discharge accessories include a discharge air/water separator constructed of high density polyethylene that also serves as the partial recirculation reservoir tank. The recirculation reservoir has a two station, combination level sensor/sight glass to maintain proper liquid level. The pump discharge separator vents are manifolded, and a flexible connector is provided for job site installation to facilitate connection of vent piping to the exterior of the building.

Recirculation liquid control is interactive through a temperature sensor, with a range of 75°F to 90°F. Each recirculation liquid line will include a strainer and isolation/flow regulation valve.

The make-up water lines include a strainer, regulating valve, solenoid valve with manual priming valve and flexible connector.

VACUUM RECEIVER

The Vacuum Receiver is constructed to ASME standards, rated for full vacuum, and include a valved by-pass, manual drain valve, sight window, vacuum gauge and the National Board label.

SYSTEM CONTROLS

The UL listed electrical motor control system includes a fuseless design in a NEMA 12 enclosure. The “Continuous On Demand” feature stops the operation of the motors during periods of low or no demand. The controls include individual self protected combination motor controls with short circuit, single phase and thermal overload protection, individual 120 volt control circuit transformers with fuseless primary and secondary protection, pressure sensors, and an electronic controller to automatically switch the operating sequence of the vacuum pumps. The cabinet door has an HMI (Human Machine Interface) Color Touch Screen system status display to include system pressure, pump operation, accumulated time, maintenance interval, fault conditions and silence button; lighted Hand-Off-Automatic selector switches and safety disconnect operating handles.

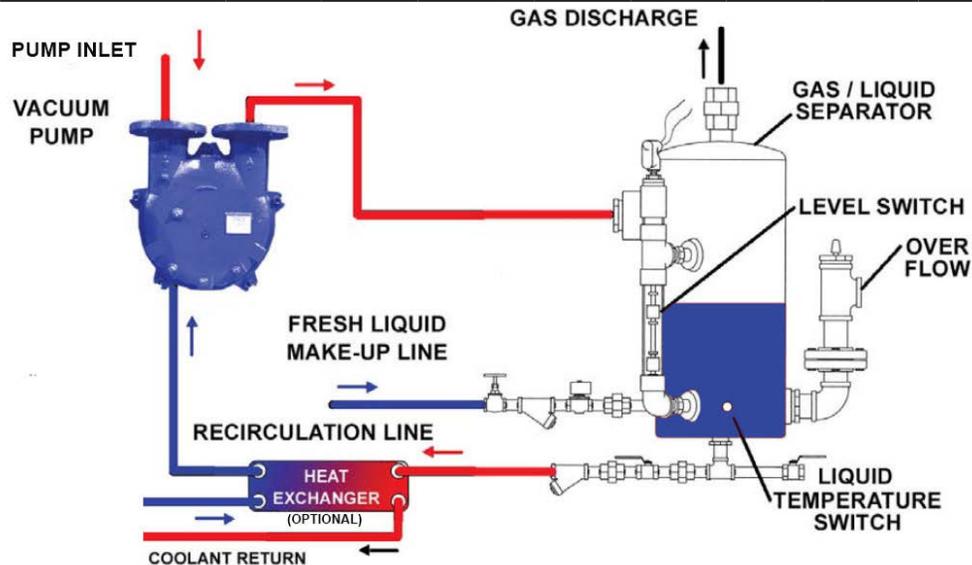

All required local alarm functions are integrated into the packaged system. The circuitry is designed so the audible signal can be silenced and the visual indicator will remain until the fault has been cleared and the reset button actuated. Local alarm functions are provided for reserve pump in use (lag alarm). Dry contacts are furnished for remote (master) alarm signals.

ACCESSORIES

Accessories included for job site installation are inlet and discharge flexible connectors, source isolation valve, vibration mounting pads and touch-up paint.

OIL-LESS ROTARY SCROLL COMPRESSED AIR SYSTEMS

LCD Color Touch Screen Available

- Ohio Medical Scroll Systems feature a dedicated pump to motor design. This ensures optimal design safety and energy efficiency by cycling on fewer motors during low demand in lieu of starting multi pump modules.
- Quiet
- Low vibration
- 10,000 hour maintenance interval for tip seals
- 5,000 hour maintenance interval for shaft bearing
- Dew point dependent switching cycles on desiccant dryers
- NFPA® 99 compliant
- UL Listed Electrical Control Panel
- Warranty: 30/24

OIL-LESS ROTARY SCROLL COMPRESSED AIR SYSTEMS

Ohio Medical Oil-Less Rotary Scroll Compressed Air System is fully NFPA® 99 compliant. The unit consists of electric motor driven single stage Oil-Less rotary scroll air compressor module(s), electrical control system, ASME air receiver, air cooled aftercooler(s) with individual drains, inline intake air filters, air treatment module, interconnection copper/brass piping, and wiring. The components are modularly assembled to accommodate most existing doorways and designed for serviceability. The packaged unit is factory tested prior to shipment and warranted for a period of 30 months from date of shipment or 24 months from date of start-up.

AIR COMPRESSOR MODULES

The compressor(s) have PTFE composite tip seals and be rated for 10,000 hours of operation. Compressors bearings are external to the compression chamber and serviceable. Compressors with bearings that are not accessible for service and have limited life span are not accepted. Each belt driven compressor module inlet include an inline filter with particle retention of 5 microns, inlet isolation valve and flex connector. The compressor discharge piping includes air cooled after cooler with moisture separator and automatic drain, isolation valves, ASME safety pressure relief valve, thermal malfunction shutdown device.

AIR RECEIVER

The corrosion resistant coated receiver is equipped with an ASME safety pressure relief valve, sight glass pressure gauge, automatic drain, three-valve by-pass and source isolation valve.

AIR TREATMENT MODULE

The Air Treatment Module includes dual dryers, dual filtration system, and a CO and Dew Point monitoring device with local audible and visual signals and dry contacts for remote monitoring. The components are mounted on a common base with interconnecting copper/brass piping and upstream and downstream isolation valves. The isolation valves allow either set of components to be serviced without shutting down the system.

The dryer system are duplexed and provide a pressure dew point of 10°F. Dryers are heatless desiccant design, selected and sized to provide for the peak-calculated demand. The desiccant dryer is equipped with a Dewpoint Dependent Switching feature to minimize the need for purge air.

The dual filtration system is designed to remove liquids and particulate matter, and consists of one micron coalescing filters with differential pressure indicators and automatic drain, air line pressure regulators with gauges, final pressure relief valve, and sampling valve.

SYSTEM CONTROLS

The UL listed electrical motor control system contains a fuseless design in a NEMA 12 enclosure. The “Continuous On Demand” feature stops the operation of the motors during periods of low or no demand. The controls include individual self protected combination motor controls with short circuit, single phase and thermal overload protection, individual 120 volt control circuit transformers with fuseless primary and secondary protection, pressure sensors, temperature switches with reset button, and an electronic controller to automatically change the operating sequence of the compressors. The cabinet door has an HMI (Human Machine Interface) Color Touch Screen system status display to include system pressure, dewpoint, pump operation, accumulated time, maintenance interval, fault conditions, and silence button; lighted Hand-Off-Automatic selector switches and safety disconnect operating handles. All required local alarm functions are integrated into the packaged system.

ACCESSORIES

Accessories included for job site installation are inlet and discharge flexible connectors, vibration mounting pads, and source isolation valve.

OIL-LESS RECIPROCATING PISTON AIR COMPRESSOR SYSTEMS

LCD Color Touch Screen Available

- Oil-Less Air Compressors
- Available in Simplex, Duplex, Triplex and Quadruplex
- Configurations: Tank, Base or Stack Mounted
- Medical and Laboratory Configurations
- NFPA® 99 compliant
- UL Listed Electrical Control Panel
- Warranty: 30/24 months

OIL-LESS RECIPROCATING PISTON AIR COMPRESSOR SYSTEMS

Ohio Medical reciprocating NFPA® 99 compliant air compressor systems consist of electric motor driven Oil-Less air compressor(s), an Underwriters Laboratories listed electrical control mounted in a NEMA 12 enclosure, ASME air receiver, air cooled aftercooler(s) with individual drain(s), inline intake air filter(s) and an air treatment module. The components are modularly assembled to accommodate most existing doorways. The system includes interconnecting copper/brass piping and wiring to provide a functional operating package with applicable electrical and plumbing connections at the installation site. The packaged unit is factory tested prior to shipment and warranted for a period of 30 months from date of shipment or 24 months from date of start-up.

COMPRESSOR MODULES

The compressor(s) consists of a crankcase, connecting rods, integral counterweights for smooth operation, and cylinders and heads designed for efficient heat dissipation. Piston rings are provided to reduce wear and have a life span of 10,000 hours. Each compressor cylinder is protected by a temperature switch, which will stop the drive motor and provide an alarm signal in the event of abnormal discharge air temperature. Each belt driven compressor module includes an inline filter with a particle retention of 5 microns, inlet isolation valve discharge isolation valve, and ASME safety pressure relief valve.

AIR RECEIVER

The corrosion resistant coated receiver is equipped with an ASME safety pressure relief valve, sight glass pressure gauge, automatic drain, three-valve by-pass and source isolation valve.

AIR TREATMENT MODULE

The air treatment module includes dual dryers, dual filtration system, and a CO and Dew Point monitoring device with local audible and visual signals and dry contacts for remote monitoring. The components are mounted on a common base with interconnecting copper/brass piping and upstream and downstream isolation valves. The isolation valves allow either set of components to be serviced without shutting down the system.

The dryer system is duplexed and provide a pressure dew point of 10°F. Dryers are heatless desiccant design selected and sized to provide for the peak-calculated demand. The desiccant dryer is equipped with a Dew point Dependent Switching feature to minimize the need for purge air.

The dual filtration system is designed to remove liquids and particulate matter, and consists of one micron coalescing filters with differential pressure indicators and automatic drain, air line pressure regulators with gauges, final pressure relief valve, and sampling valve.

SYSTEM CONTROLS

The UL listed electrical motor control system contains a fuseless design in a NEMA 12 enclosure. The “Continuous On Demand” feature stops the operation of the motor(s) during periods of low or no demand. The controls include individual self protected combination motor control(s) with short circuit, single phase and thermal overload protection, individual 120 volt control circuit transformer(s) with fuseless primary and secondary protection, pressure sensors, temperature switches with reset button, and an electronic controller to automatically change the operating sequence of the compressor(s). The cabinet door has an HMI (Human Machine Interface) Color Touch Screen system status display to include system pressure, dewpoint, pump operation, accumulated time, maintenance interval, fault conditions, and silence button; lighted Hand-Off-Automatic selector switch(es) and safety disconnect operating handles.

All required local alarm functions are integrated into the packaged system. The circuitry is designed so the visual indicator will remain until the fault has been cleared and the reset button actuated. Local alarm functions are provided for high air discharge temperature and thermal overload.

ACCESSORIES

Included for job site installation are inlet and discharge flexible connectors, vibration mounting pads, source isolation valve, and touch-up paint.

CALCULATED PEAK DEMAND FOR A MEDICAL AIR SYSTEM IN A TYPICAL SHORT TERM GENERAL HOSPITAL

Total Estimated Peak Flow (In SCFM @ 50 psiG)							

* Important! You must consult with respiratory therapy personnel concerning the maximum number of ventilators that could be used at one time and the average flow rates for each ventilator. DO NOT CALCULATE your total peak requirements without this information.

** If powered by Medical Air

REPLACEMENT DESICCANT DRYER PACKAGES

The air treatment module includes dual dryers, a dual filtration system, and a CO and Dew Point monitoring device with local audible and visual signals and dry contacts for remote monitoring. The components are mounted on a common base with interconnecting copper/brass piping and upstream and downstream isolation valves. The isolation valves allow either set of components to be serviced without shutting down the system.

The dryer system is duplexed and provides a pressure dew point of 10°F. Dryers are heatless desiccant design selected and sized to provide for the peak-calculated demand. The desiccant dryer is equipped with an economiser Dependent Switching feature to minimize the need for purge air.

The dual filtration system is designed to remove liquids and particulate matter, and consists of one micron coalescing filters with differential pressure indicators and automatic drain, air line pressure regulators with gauges, final pressure relief valve, and sampling valve.

- Ohio Medical compressor control panel provides highly efficient purge and switching control
- The advanced design provides clean, dry air for many different applications
- Has a compact, lightweight design and can be wall mounted to save space
- Perfect solution for a field upgrade on older existing air compressor systems
- NFPA® 99 compliant
- UL Listed Electrical Control Panel

ENCLOSED SCROLL PANEL & ACCESSORIES

MICROPROCESSOR CONTROL PANEL

- Start / stop control buttons
- Microprocessor logic to cascade compressors as needed
- Power on light & run light
- Pressure gauge - digital
- Hour meter - digital
- High discharge temperature shutdown alarm indication light (error codes)
- Discharge temperature reading - digital
- Time indication for alarms indication
- High air temp shutdown
- Over current shutdown
- Dry contact for remote alarm

After Filter

- 1 micron particulate filtration
- Element Replacement Gauge
- Moisture Drain Valve

CO/Dewpoint

- LCD Display
- CO: 0-100 PPM
- Dewpoint: -112°F + 68°F
- Visual and Audible Alarms
- Available as CO, Dewpoint, or Combo

Dessicant Dryer

- -40°F Dewpoint
- Integrated Inlet & Outlet filtration
- Energy Saving Dewpoint depending switching
- Dessicant Cartridges for Ease of Maintenance

Receiver

- ASME® Certified
- 200 psi Working Pressure
- Corrosion Resistant Lining

Ohio Medical Parts and Service Department offers pumps for most brands.

OIL-LESS SCROLL COMPRESSORS

The Oil-Less Scroll Air Compressor can be operated at either 3, 5, 7.5, or 10 hp. Choose between low pressure (110 psi) and high pressure (140 psi) models. Compare to *Powerex* and *Atlas Copco* scrolls.

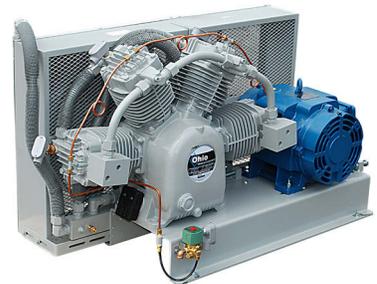

Bare Compressor Scroll Air Ends (without motor)				
Part Number	Description	hp	Max Pressure	CFM @ 50 psiG
230074	Low Pressure	3 or 5	115	9.9
230075	High Pressure	3 or 5	145	16.4

OIL-LESS RECIPROCATING COMPRESSOR MODULES

These compressor modules are ideal for hospitals and laboratories. Ranging in size from 3 to 30 hp, the modules include the compressor, motor, belt, guard, aftercooler, temperature switches, and unloader solenoid.

LIQUID RING VACUUM PUMPS

Compact, Motor Mounted (A Series)

Motor mounted SM pumps are compact, which make them ideal for laboratory and medical applications. Standard motors are 230/460 volt, 3 ph. All models feature stainless steel impellers and mechanical seals.

ACCESSORIES

PRESSURE & VACUUM SWITCH

Pressure and vacuum switches are available for all medical gases. They are enclosed in a Nema 4 water tight housing and feature normally open or normally closed contacts.

NITROGEN PRESSURE SWITCH

Nitrogen pressure switches are mounted in a Nema 4 water tight enclosure. They have a pressure range of 10 to 250 psi.

GAUGES

Dual scale gauges are offered for vacuum and positive pressure gases. The gauge diameter is 2" and has a 1/8" NPT connection.

GAS SPECIFIC QUICK CONNECT

Medical gas check valves are of the dual port 3 piece design for ease of maintenance. They are fitted with K copper extensions.

INLET LIQUID SEPARATOR

See through liquid separators are ideal for protecting vacuum pumps from liquids and large particulates.

INTEGRATED LIQUID SEPARATORS

Combination Liquid Separator/Vacuum Filters are designed for challenging applications with liquids in the process stream. They serve the dual purposes of knocking out liquids and filtering particulates.

CLEAR HOUSING FILTER

Compact "T" style filters feature cast aluminum tops with machined FPT connections and integrated baffles. All models have polyester elements and clear collection buckets for easy filter monitoring. Paper elements are also available.

HEAVY DUTY FILTERS

Larger inlet vacuum filters have high dirt-holding capacity. Standard models have paper elements; polyester and high heat (to 385°F) versions also available.

MEDICAL LABORATORY FILTERS

Medical/Laboratory filters remove liquids, solids, and sub-micron particles. The ULPA media complies with HTM2022 & BS3928: 1969 efficiency levels.

The clear bucket includes a brass valve and fitting for contaminated liquid release and a removable and sterilizable drain flask.

Nominal Rating SCFM	41	102	102	200	200
Approx. Holding Capacity (gallons)	14 lb.	17 lb.	16 lb.	31 lb.	27 lb.

COMPACT FILTERS

These inlet vacuum filters are ideal for a multitude of applications. Standard models include paper filter elements; polyester and high heat elements (to 385°F) are also available.

REBUILD AND FILTER KITS

Rebuild Filter Kits are also compatible with Busch Rotary Vane Vacuum Pumps.
